Issued by the Registrar-General.

LONDON:

PRINTED AND PUBLISHED BY HIS MAJESTY'S STATIONERY OFFICE.

To be purchased directly from H.M. STATIONERY OFFICE at the following addresses:

Adastral House, Kingsway, London, W.C.2; 120, George Street, Edinburgh;

York Street, Manchester; 1, St. Andrew's Crescent, Cardiff;

15, Donegall Square West, Belfast;

or through any Bookseller.

1931.

Price 9d. net.

EXPLANATORY STATEMENT.

The figures relating to Births and Deaths are tabulated from Returns furnished by the Local Registrars, those relating to Marriages from Returns received from the Clergy, Authorised Persons, Registrars of Marriages, &c. The live births and deaths for the English and Welsh towns in Tables III., V., VI. and VII. have been provisionally corrected by the exclusion of those not belonging to the town and as far as possible by the inclusion of those belonging to the town but occurring in other areas. These figures may not correspond exactly with the revised figures published later in the Statistical Review.

The figures relating to Notifications of Infectious Diseases are summarised from those published in the Weekly Returns, adjusted in respect of any returns or corrections received too late for insertion in that series.

Table I. shows, for England and Wales, the Marriages, Births and Deaths for the 10 years preceding, and for each quarter of those years.

Table II. shows the Annual Rates calculated on the above.

Table III. shows the Birth and Death Rates, and Analysis of Mortality during the last 5 quarters, in (a) England and Wales, (b) 107 County Boroughs and Great Towns, and (c) Smaller Towns with adjusted populations 20,000–50,000 in 1921.

Table IV. shows the Births, Deaths (distinguishing deaths of Infants under one year) in the Quarter under review for Administrative Counties with the Associated County Boroughs, and Table IVa. the Marriages in the preceding Quarter in England and Wales by Registration Counties.

Table V. shows, for the 107 County Boroughs and Great Towns and the Metropolitan Boroughs, the Births and Deaths (distinguishing certain causes and deaths of Infants under one year) and the corresponding annual rates.

Table VI. shows, for the 159 Smaller Towns, the Births and Deaths (distinguishing certain causes and deaths of Infants under one year) for the quarter.

Table VII. shows the Births and Deaths (distinguishing certain causes) and death-rates in London and in certain cities in the British Empire and in foreign countries, in the last available quarter.

Table VIII. is a summary of returns of Notified cases of Infectious Diseases. These figures are included in the present publication by arrangement with the Ministry of Health, in pursuance of Section 5 of the Census Act, 1920.

Table VIIIa. shows the local distribution of the cases of small-pox notified.

*Note:—*The returns for the quarters ending 30th June and 31st December respectively contain lists of the changes of boundaries of administrative areas during the six months ending on these dates, that for the quarter ending 30th September a table relating to summer mortality in London from diarrhoea and enteritis, and that for the quarter ending 31st December a summary of certain figures for the year.

NOTES ON THE FIRST QUARTER OF 1931.

ENGLAND AND WALES.

Births.

The 159,820 live Births registered in the *First Quarter* of 1931 were 1,149 more than the number recorded in the corresponding Quarter of 1930, and corresponded to an annual rate of 16·3 per 1,000 of the estimated mid-year population for the year 1930. The illegitimate live Births totalled 7,140, or 8 less than the number shown in the Return for the First Quarter of 1930.

Of these 159,820 live Births 81,881 were males and 77,939 females, giving a proportion of 1,051 males to 1,000 females; the average proportion in the 10 preceding First Quarters was 1,046.

The number of Stillbirths, the corresponding annual rate per 1,000 population, and the percentage of the total Births registered during the last ten Quarters are shown below.

Quarter.	Number.	Annual rate per 1,000 population.	Percentage of total births registered.
Dec. 1928 ...	6,760	0·68	4·2
March, 1929 ...	6,878	0·70	4·1
June " ...	6,937	0·70	3·9
Sept. " ...	6,569	0·66	3·9
Dec. " ...	6,463	0·65	4·1
March, 1930 ...	7,051	0·72	4·3
June " ...	7,094	0·71	4·0
Sept. " ...	6,827	0·68	4·0
Dec. " ...	6,535	0·65	4·1
March, 1931 ...	7,078	0·72	4·2

Deaths.

The Deaths (excluding stillbirths) registered numbered 162,198 and were 46,500 more than in the preceding Quarter, and 30,252 more than in the corresponding Quarter of 1930. They comprised 81,078 males and 81,120 females, a proportion of 999 males to 1,000 females. The death-rate was 16·5 per 1,000 of the estimated population or 3·1 per 1,000 above that recorded during the First Quarter of last year.

The Mortality of infants under one year of age was equal to 94 per 1,000 registered live births. This rate was 2 per 1,000 above the average of the 10 preceding First Quarters

Urban Mortality.

The highest death-rates from certain epidemic diseases in the 107 Great Towns (Table V.) last quarter were as follows:—

From *measles* 0·77 in St. Helens, 0·83 in Sunderland, 0·83 in Kingston-upon-Hull, 0·98 in Gateshead, 1·27 in Liverpool, and 1·49 in Newcastle-on-Tyne; from *whooping cough* 0·35 in Wakefield, 0·38 in Birkenhead, 0·44 in Burnley, 0·46 in West Hartlepool, 0·57 in South Shields and 0·62 in Gloucester; from *diphtheria* 0·30 in Warrington, 0·31 in Merthyr Tydfil, 0·32 in Liverpool, 0·35 in Wakefield, 0·38 in Smethwick and 0·38 in Birkenhead; from *influenza* 1·68 in Darlington, 1·68 in Bath, 1·69 in Preston, 1·76 in Stockport, 1·97 in Aberdare, 2·00 in Swindon and 2·46 in Canterbury.

The highest death-rates per 1,000 live Births from *diarrhoea* and *enteritis* among children under two years of age were 18·4 in Salford, 18·9 in Warrington, 19·9 in Dudley, 21·2 in Wakefield, 22·2 in Manchester and 23·4 in Stoke-on-Trent.

Small-pox.

During the Quarter small-pox was mentioned as a cause of death in two cases, which have been provisionally classified to small-pox and assigned to Leicester C.B., and Surrey Ad. Co, Guildford R.D.

A supplementary table (VIIIa.) showing the distribution of the cases of small-pox notified during the 13 weeks ended 4th April, 1931, is given on page 24.

NATURAL INCREASE OR DECREASE.

The natural *decrease* of population by excess of Deaths over Births was 2,378 as against an increase of 31,627 in the corresponding Quarter of 1928, a decrease of 44,262 in 1929 and an increase of 26,725 in 1930.

NOTES ON MARRIAGES.—Fourth Quarter, 1930.

The number of *persons* married in the *Fourth* quarter of 1930 in England and Wales was 159,150, a decrease of 37,524 on the number in the preceding Quarter and 6,316 less than that in the corresponding quarter of 1929. The number corresponds to an annual rate of 15·9 per 1,000 of the estimated mid-year population.

UNITED KINGDOM AND IRISH FREE STATE.—

Third Quarter, 1930.

In Great Britain and Ireland 209,911 births and 121,678 deaths were registered in the three months ended 30th September, 1930. The increase of population owing to the excess of births over deaths was therefore 88,233. The number of persons married was 227,166.

For facts, in detail, concerning Scotland, Northern Ireland, and the Irish Free State, reference should be made to the Returns published by their respective Registrars-General.

METEOROLOGY.***JANUARY, 1931.**

The first half of January was cold with much fog and generally light precipitation, the second half mild, wet and windy with moderately heavy precipitation about the 22nd and during the last week. Monthly mean temperatures were mostly within 1° F. of the normal. Screen minima of 25° F. and below and severe ground frost were recorded in several places on the mornings of the 5th to the 9th. The low temperatures were favourable to the formation of fog which was very prevalent especially in large industrial areas. Although precipitation occurred frequently the falls were slight as a rule; monthly totals were deficient over large areas in the Midlands and the south-east but over the country as a whole the general precipitation did not differ materially from the normal. Snow or sleet occurred in the Midlands and the east of England on the 3rd and 4th, in the south-east on the 9th, widely from the 12th to 14th and in northern districts on the 18th, 19th and 31st. Bright periods frequently occurred, a prominent feature of the weather of the month being the pronounced excess of sunshine recorded in most districts.

FEBRUARY, 1931.

Squally westerly or north-westerly winds and frequent wintry precipitation were the chief features of the weather during February. Practically every district had some snow but falls were most frequent in the northern, Midland and eastern districts, in Wales and on high ground in the south; snow fell on 17 days at Sheffield and Huddersfield and on 15 days at Cranwell, Belper and Buxton. Owing to stormy conditions there was much drifting at times and in the north many roads were blocked. Monthly mean temperatures slightly exceeded the normal in the west and south-west of England and in Wales, but in the majority of places they were somewhat below the normal. The maximum temperatures recorded on the 25th were the highest in February for many years; 60° F. was recorded at Worksop and 59° F. at Sealand (near Chester) and Cleethorpes. Night minimum temperatures were not remarkable and although ground frosts were common, they were seldom severe. Apart from a deficiency in the extreme north-east and locally in the south of England and in Anglesey, monthly rainfall totals were decidedly above the normal, many places in a broad belt stretching from Lancashire and Northern Wales to East Anglia recording one and one-half to twice the normal. A moderate excess of sunshine was recorded on the south coast of England but at the majority of places sunshine aggregates were below the normal especially in the north-west and east of England.

* Furnished by the Director of the Meteorological Office.

MARCH, 1931.

March was on the whole cold, dry and sunny. There was a marked predominance of winds between south-east and north, a spell of easterly winds from the 6th to the 10th being accompanied by unusually cold weather and wintry precipitation. In marked contrast were the few days of southerly winds and warm weather from about the 16th to the 22nd, during which the temperature rose to 69° F. in London and at Cardington on the 20th. In fact the range in temperature during the month was one of its noteworthy features. At Rickmansworth the air temperature ranged from 5° F. on the 10th to 68° F. on the 20th. In consequence of the prevalence of cold winds between north-east and south-east during the first half of the period mean temperatures were below the normal, the only exceptions occurring in the extreme south-west of England. Severe frost in the screen and on the ground was recorded in many places on the 1st and 2nd. Unusually low temperatures both by day and night were recorded widely during the spell of easterly to northerly winds between the 6th and 10th. In many parts of the east and south-east of England the temperature remained below freezing point on the 9th and at Richmond (Kew Observatory) the maximum temperature 31° F. was the lowest on record for March. At Ross-on-Wye the temperature on the 9th failed to exceed 33° F., the lowest maximum with one exception, 31° F. on March 12th, 1928, since records were commenced there in 1869. Severe frost occurred at night and in the south-east of England some remarkably low screen minimum temperatures were recorded during the night of the 9th to 10th, e.g., 5° F. at Rickmansworth, 13° F. at South Farnborough, 14° F. at Bournemouth and Dungeness and 15° F. at Winchester. Amongst the lowest temperatures recorded by the terrestrial radiation thermometer during the same night were -3° F. at Rickmansworth (ground snow-covered), 1° F. at Lympne, 1° F. at South Farnborough and 4° F. at Kew and Shoeburyness. A prominent feature of the weather of the period was its dryness. With only a few exceptions, chiefly in Cornwall, monthly totals of precipitation were decidedly below the normal. The deficiency was most pronounced in the Midlands where less than 10 per cent. of the normal was recorded in many places whilst in some places the month was almost rainless; at Luton there was one day on which measurable precipitation occurred. Rothamsted had 2 days of measurable precipitation, the total for the month amounting to 4 per cent. of the normal. The month was the driest March at Meltham (Yorks) for more than 50 years and at Southport (Lancs.) for at least 60 years.

Sunshine aggregates were well above the normal especially in the east of England, where aggregates were largest, and in the north-west.

† The rates for 1930 and 1931 are provisional.

‡ Provisional.

‡ Estimated Population 1930.

Table III.—BIRTH-RATE, DEATH-RATE AND ANALYSIS OF MORTALITY during the last Five Quarters.

(Provisional figures. The rates for England and Wales for the year 1930 have been calculated on the population estimated to the middle of that year, while those for the Towns have been calculated on populations estimated to the middle of 1929. The mortality rates refer to the whole population as regards England and Wales, but only to civilians as regards the groups of towns.)

	QUARTER.	ANNUAL RATE PER 1,000 TOTAL POPULATION.			ANNUAL DEATH-RATE PER 1,000 POPULATION.							DEATH-RATE PER 1,000 LIVE BIRTHS.	
		LIVE BIRTHS.	STILL-BIRTHS.	All Causes.	Enteric Fever.	Measles.	Scarlet Fever.	Whooping Cough.	Diphtheria.	Influenza.	Violence.	Diarrhoea and Enteritis (under 2 Years).	Total deaths under one Year.

* Excluding non-civilians.

† The populations relate to 1931, except in the case of Belfast, which is the Census figure of 1926, yearly estimates having been discontinued. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland. Births are similarly corrected. Deaths in Dublin and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas, and in the case of Belfast by the inclusion of certain institutional deaths occurring elsewhere. The figures for Edinburgh and Glasgow relate to the calendar quarter.

Table VI.—159 SMALLER TOWNS } POPULATION, BIRTHS, and DEATHS for Quarter
(Adjusted populations 20,000– } ended 31st March, 1931.
50,000 in 1921).

EXPLANATORY STATEMENT.

The figures relating to Births and Deaths are tabulated from Returns furnished by the Local Registrars, those relating to Marriages from Returns received from the Clergy, Authorised Persons, Registrars of Marriages, &c. The live births and deaths for the English and Welsh towns in Tables III., V., VI. and VII. have been provisionally corrected by the exclusion of those not belonging to the town and as far as possible by the inclusion of those belonging to the town but occurring in other areas. These figures may not correspond exactly with the revised figures published later in the Statistical Review.

The figures relating to Notifications of Infectious Diseases are summarised from those published in the Weekly Returns, adjusted in respect of any returns or corrections received too late for insertion in that series.

Table I. shows, for England and Wales, the Marriages, Births and Deaths for the 10 years preceding, and for each quarter of those years.

Table II. shows the Annual Rates calculated on the above.

Table III. shows the Birth and Death Rates, and Analysis of Mortality during the last 5 quarters, in (a) England and Wales, (b) 107 County Boroughs and Great Towns, and (c) Smaller Towns with adjusted populations 20,000–50,000 in 1921.

Table IV. shows the Births, Deaths (distinguishing deaths of Infants under one year) in the Quarter under review for Administrative Counties with the Associated County Boroughs, and Table IVa. the Marriages in the preceding Quarter in England and Wales by Registration Counties.

Table V. shows, for the 107 County Boroughs and Great Towns and the Metropolitan Boroughs, the Births and Deaths (distinguishing certain causes and deaths of Infants under one year) and the corresponding annual rates.

Table VI. shows, for the 159 Smaller Towns, the Births and Deaths (distinguishing certain causes and deaths of Infants under one year) for the quarter.

Table VII. shows the Births and Deaths (distinguishing certain causes) and death-rates in London and in certain cities in the British Empire and in foreign countries, in the last available quarter.

Table VIII. is a summary of returns of Notified cases of Infectious Diseases. These figures are included in the present publication by arrangement with the Ministry of Health, in pursuance of Section 5 of the Census Act, 1920.

Table VIIIa. shows the local distribution of the cases of small-pox notified.

*Note:—*The returns for the quarters ending 30th June and 31st December respectively contain lists of the changes of boundaries of administrative areas during the six months ending on these dates, that for the quarter ending 30th September a table relating to summer mortality in London from diarrhoea and enteritis, and that for the quarter ending 31st December a summary of certain figures for the year.

NOTES ON THE SECOND QUARTER OF 1931.

ENGLAND AND WALES.

Births.

The 163,874 live Births registered in the *Second* Quarter of 1931 were 6,338 less than the number recorded in the corresponding Quarter of 1930, and corresponded to an annual rate of 16·5 per 1,000 of the preliminary 1931 Census population. The illegitimate live Births totalled 7,444, or 333 less than the number shown in the Return for the Second Quarter of 1930.

Of these 163,874 live Births 83,596 were males and 80,278 females, giving a proportion of 1,041 males to 1,000 females; the average proportion in the 10 preceding Second Quarters was 1,043.

The number of Stillbirths, the corresponding annual rate per 1,000 population, and the percentage of the total Births registered during the last ten Quarters are shown below.

Quarter.	Number.	Annual rate per 1,000 population.	Percentage of total births registered.
1929			
March	6,878	0·70	4·1
June	6,937	0·70	3·9
Sept.	6,569	0·66	3·9
Dec.	6,463	0·65	4·1
1930			
March	7,051	0·72	4·3
June	7,094	0·71	4·0
Sept.	6,827	0·68	4·0
Dec.	6,535	0·65	4·1
1931			
March	7,078	0·72	4·2
June	6,935	0·70	4·1

Deaths.

The Deaths (excluding stillbirths) registered numbered 114,700 and were 47,498 less than in the preceding Quarter, and 3,347 more than in the corresponding Quarter of 1930. They comprised 58,760 males and 55,940 females, a proportion of 1,050 males to 1,000 females. The death-rate was 11·5 per 1,000 of the population or 0·3 per 1,000 above that recorded during the Second Quarter of last year.

The Mortality of infants under one year of age was equal to 58 per 1,000 registered live births. This rate was 7 per 1,000 below the average of the 10 preceding Second Quarters.

Urban Mortality.

The highest death-rates from certain epidemic diseases in the 107 Great Towns (Table V.) last quarter were as follows :—

From *Measles* 0·45 in Newport (Mon.), 0·49 in Aberdare, 0·72 in Barnsley, 0·88 in West Hartlepool, 1·12 in South Shields, and 1·18 in Sunderland; from *whooping cough* 0·15 in Gloucester, 0·16 in Birkenhead, 0·17 in Sunderland, 0·23 in West Hartlepool, 0·25 in South Shields and 0·42 in Great Yarmouth; from *diphtheria* 0·18 in Tottenham, 0·18 in Ipswich, 0·24 in Liverpool, 0·34 in Wakefield and 0·40 in Rochdale; from *influenza* 0·40 in Oxford, 0·40 in Dudley, 0·40 in Warrington, 0·41 in Wakefield, 0·41 in Stockton-on-Tees, 0·49 in Aberdare and 0·61 in Barnsley.

The highest death-rates per 1,000 live Births from *diarrhœa and enteritis* among children under two years of age were 13·0 in West Bromwich, 13·5 in Coventry, 14·1 in Sunderland, 14·3 in Salford and 19·8 in Great Yarmouth.

Small-pox.

During the Quarter small-pox was mentioned as a cause of death in six cases, which have been provisionally classified to small-pox. Two cases were assigned to Stepney (Met. B.) and one each to Lambeth (Met. B.), Burton-on-Trent C.B., Coalville U.D. (Leicestershire Ad. Co.) and Market Bosworth R.D. (Leicestershire Ad. Co.).

A supplementary table (VIIIa.) showing the distribution of the cases of small-pox notified during the 13 weeks ended 4th July, 1931, is given on page 24.

NATURAL INCREASE OR DECREASE.

The natural *increase* of population by excess of Births over Deaths was 49,174 as against natural increases of 56,255, 50,723 and 58,859 in the corresponding quarters of 1928, 1929 and 1930.

NOTES ON MARRIAGES.—First Quarter, 1931.

The number of *persons* married in the *First* quarter of 1931 in England and Wales was 93,208, a decrease of 65,942 on the number in the preceding Quarter and 4,286 less than that in the corresponding quarter of 1930. The number corresponds to an annual rate of 9·5 per 1,000 of the preliminary 1931 Census population.

UNITED KINGDOM AND IRISH FREE STATE.—

Fourth Quarter, 1930.

In Great Britain and Ireland 197,665 births and 145,655 deaths were registered in the three months ended 31st December, 1930. The increase of population owing to the excess of births over deaths was therefore 52,010. The number of persons married was 185,614.

For facts, in detail, concerning Scotland, Northern Ireland, and the Irish Free State, reference should be made to the Returns published by their respective Registrars-General.

METEOROLOGY.***APRIL, 1931.**

April was unsettled, dull and very wet. Associated with a considerable prevalence of north-westerly to northerly winds and the general deficiency of sunshine, day maximum temperatures were mostly below the normal, especially during a spell of north-easterly winds about the 19th. The general coldness was relieved, however, by a brief spell of warm weather from about the 8th to the 12th, the temperature rising above 65° F. in many places on the 10th, 11th and 12th (67° F. at Camden Square, London, on the 11th). In contrast to the dryness of March, rainfall totals were appreciably above the normal except in some coastal areas in the south-west and west, exceeding twice the normal in most parts of the Midlands and the eastern counties. London (Westminster) had 274 per cent. of the normal April rainfall and Richmond (Surrey), where the month was the wettest April since 1871, 251 per cent. The excess of rainfall was accompanied by a marked and general lack of sunshine and in many places the average daily loss relative to the normal exceeded two hours. In the south and west Easter Monday (April 6th) was dull and in the south-east wet.

MAY, 1931.

Unsettled wet and cloudy weather prevailed throughout most of May. The prevailing winds were southerly; at Southport the month was a very unusually south-easterly and southerly May. Associated with the prevalent wet and cloudy weather was a paucity of warm spells. At many stations the mean maximum temperature for the month was below the normal. Owing, however, to the prevalent cloudy skies the nights were mild and as a result mean temperatures were from 1° F. to 2° F. above the normal locally in the Midlands and in the east of England and about the normal in most other districts. The warmest days occurred between the 25th and 30th; in London the temperature reached or exceeded 70° F. on the 25th (Whit Monday), 26th, 27th and 30th, while in most parts of the country 70° F. and over was recorded on the 27th (78° F. at Camden Square, London). There was a slight to moderate deficiency of precipitation locally in the north-west but elsewhere a decided excess; in the south-west as a result of heavy thunderstorm rain on the 27th to 28th monthly totals ranged from over one and one-half times the normal in the south-west of England to over twice the normal in central Wales. The area most affected by the severe thunderstorms on the 27th, which caused much material damage locally, were central and southern Wales, the counties of Devonshire, Somerset and Dorset and the Isle of Wight; at Cardiff, where severe floods occurred, 106 mm. fell on the 27th, the largest fall since July 14th, 1875, when 123 were recorded at Lisvane. In most districts sunshine aggregates were deficient, the deficiency being most pronounced in south Wales and in south-west England. In general, however, the lack of sunshine was not so great as in April.

* Furnished by the Director of the Meteorological Office.

JUNE, 1931.

Very unsettled, dull and wet weather prevailed with little intermission until the 19th, after which a gradual change to anti-cyclonic conditions took place, the weather in most districts during the last week of the month being fine and warm, except in the south-east on the 24th and 25th. Monthly mean temperatures were mostly above the normal, locally in the east of England by more than 2° F. The excess was largely due, however, to warm nights rather than to any markedly warm spells. Thunderstorms occurred in most districts on three or four days on an average and in a few places, mostly in the Midlands and the East of England, on as many as six or seven days. Severe thunderstorms accompanied locally by torrential rain and hail occurred in southern England on the 5th and 19th and over a wide area on the 14th. Floods of unprecedented severity due to torrential thunderstorm rains occurred at Braunton (Devon) on the 5th and in several places on the afternoon and evening of the 14th. In Birmingham a tornado accompanied a thunderstorm and torrential rain during the afternoon of the 14th causing much material damage along a path about 10 miles long and from 800 to 200 yards wide passing through Greet, Small Heath and Bordesley in a north-easterly direction to the Erdington boundary. The 14th was very warm in the south-east, the temperature rising to 83° F. at Bromley (Kent) on that day. For the third consecutive month the general rainfall exceeded the normal, the excess being most pronounced in the north-west and north where monthly totals exceeded twice the normal. In the south-east, however, there was a deficiency less than half the normal being recorded locally around the mouth of the Thames estuary and in Kent and Essex. As in the two previous months sunshine aggregates were again below the normal, except at a few places on the east coast.

ENGLAND and WALES.—VALUES of AIR TEMPERATURE, RAINFALL and SUNSHINE for the SECOND QUARTER of 1931, expressed as deviations from or percentages of the normal values, for the several Districts.

† The rates for 1930 and 1931 are provisional.

§ Provisional.

‡ Preliminary 1931 Census Population.

Table III.—BIRTH-RATE, DEATH-RATE AND ANALYSIS OF MORTALITY during the last Five Quarters.

(Provisional figures. The rates for the year 1930 have been calculated on the populations estimated to the middle of that year; the rates for 1931 have been calculated upon the provisional resident population, 1931. The mortality rates refer to the whole population as regards England and Wales, but only to civilians as regards the groups of towns.)

	QUARTER.	ANNUAL RATE PER 1,000 TOTAL POPULATION.		ANNUAL DEATH-RATE PER 1,000 POPULATION.							DEATH-RATE PER 1,000 LIVE BIRTHS.		
		LIVE BIRTHS.	STILL-BIRTHS.	All Causes.	Enteric Fever.	Measles.	Scarlet Fever.	Whooping Cough.	Diphtheria.	Influenza.	Violence.	Diarrhea and Enteritis under (under 2 Years).	Total deaths and under one Year.

* Non-civilian deaths are excluded from this table and the comparable civilian populations where different from those shown are as follows:—Newcastle-on-Tyne C.B., 283,700; Carlisle C.B., 57,250; Newport (Mon.) C.B., 89,270; Cardiff C.B., 223,500; Greater London, 8,164,610; Outer Ring 3,798,610; 17 Great Towns 2,130,460; Remainder of Outer Ring 1,668,150.

† The populations of Edinburgh and Glasgow are the 1931 Census figures. That of Dublin is estimated to the middle of 1931 and that of Belfast is the 1926 Census figure, yearly estimates having been discontinued. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland. Births in Dublin and Belfast are similarly corrected. Deaths in Dublin and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas, and in the case of Belfast by the inclusion of institutional deaths occurring elsewhere. The figures for Edinburgh and Glasgow relate to the calendar quarter.

‡ Including 3 deaths from Small-pox.

EXPLANATORY STATEMENT.

The figures relating to Births and Deaths are tabulated from Returns furnished by the Local Registrars, those relating to Marriages from Returns received from the Clergy, Authorised Persons, Registrars of Marriages, &c. The live births and deaths for the English and Welsh towns in Tables III., V., VI. and VII. have been provisionally corrected by the exclusion of those not belonging to the town and as far as possible by the inclusion of those belonging to the town but occurring in other areas. These figures may not correspond exactly with the revised figures published later in the Statistical Review.

The figures relating to Notifications of Infectious Diseases are summarised from those published in the Weekly Returns, adjusted in respect of any returns or corrections received too late for insertion in that series.

Table I. shows, for England and Wales, the Marriages, Births and Deaths for the 10 years preceding, and for each quarter of those years.

Table II. shows the Annual Rates calculated on the above.

Table III. shows the Birth and Death Rates, and Analysis of Mortality during the last 5 quarters, in (a) England and Wales, (b) 107 County Boroughs and Great Towns, and (c) Smaller Towns with adjusted populations 20,000-50,000 in 1921.

Table IV. shows the Births, Deaths (distinguishing deaths of Infants under one year) in the Quarter under review for Administrative Counties with the Associated County Boroughs, and Table IVa. the Marriages in the preceding Quarter in England and Wales by Registration Counties.

Table V. shows, for the 107 County Boroughs and Great Towns and the Metropolitan Boroughs, the Births and Deaths (distinguishing certain causes and deaths of Infants under one year) and the corresponding annual rates.

Table VI. shows, for the 159 Smaller Towns, the Births and Deaths (distinguishing certain causes and deaths of Infants under one year) for the quarter.

Table VII. shows the Births and Deaths (distinguishing certain causes) and death-rates in London and in certain cities in the British Empire and in foreign countries, in the last available quarter.

Table VIII. is a summary of returns of Notified cases of Infectious Diseases. These figures are included in the present publication by arrangement with the Ministry of Health, in pursuance of Section 5 of the Census Act, 1920.

Table VIIa. shows the local distribution of the cases of small-pox notified.

Note :—The returns for the quarters ending 30th June and 31st December respectively contain lists of the changes of boundaries of administrative areas during the six months ending on these dates, that for the quarter ending 30th September a table relating to summer mortality in London from diarrhoea and enteritis, and that for the quarter ending 31st December a summary of certain figures for the year.

NOTES ON THE THIRD QUARTER OF 1931.

ENGLAND AND WALES.

Births.

The 161,267 live Births registered in the *Third Quarter* of 1931 were 4,329 less than the number recorded in the corresponding Quarter of 1930, and corresponded to an annual rate of 16·0 per 1,000 of the estimated mid-year population for the year 1931. This rate is the lowest recorded in any third quarter since the establishment of civil registration. The illegitimate live Births totalled 6,844, or 520 less than the number shown in the Return for the Third Quarter of 1930.

Of these 161,267 live Births 82,514 were males and 78,753 females, giving a proportion of 1,048 males to 1,000 females; the average proportion in the 10 preceding Third Quarters was 1,047.

The number of Stillbirths, the corresponding annual rate per 1,000 population, and the percentage of the total Births registered during the last ten Quarters are shown below.

Quarter.	Number.	Annual rate per 1,000 population.	Percentage of total births registered.
1929			
June	6,937	0·70	3·9
Sept.	6,569	0·66	3·9
Dec.	6,463	0·65	4·1
1930			
March	7,069	0·72	4·3
June	7,098	0·72	4·0
Sept.	6,850	0·68	4·0
Dec.	6,560	0·65	4·1
1931			
March	7,078	0·72	4·2
June	6,935	0·70	4·1
Sept.	6,567	0·65	3·9

Deaths.

The Deaths (excluding stillbirths) registered numbered 96,745 and were 17,955 less than in the preceding Quarter, but 356 more than in the corresponding Quarter of 1930. They comprised 49,910 males and 46,835 females, a proportion of 1,066 males to 1,000 females. The death-rate was 9·6 per 1,000 of the population or the same as that recorded during the Third Quarter of last year.

The Mortality of infants under one year of age was equal to 45 per 1,000 registered live births. This rate was 12 per 1,000 below the average of the 10 preceding Third Quarters and was the lowest recorded in any quarter.

Urban Mortality.

The highest death-rates from certain epidemic diseases in the 107 Great Towns (Table V.) last quarter were as follows :—

From *Measles* 0·23 in Middlesbrough and in West Hartlepool, 0·24 in Barrow in Furness, 0·32 in Doncaster, 0·34 in Wakefield, and 1·00 in Barnsley ; from *whooping cough* 0·16 in Bootle, 0·19 in Liverpool, 0·28 in Wigan, and 0·29 in West Hartlepool ; from *diphtheria* 0·22 in Dewsbury, 0·28 in Carlisle, 0·32 in Kingston-upon-Hull, 0·41 in Ipswich, and 0·47 in Wakefield ; from *influenza* 0·20 in Rhondda, 0·23 in Gloucester, 0·24 in Burton-on-Trent, 0·28 in Wigan, and 0·39 in Merthyr Tydfil.

The highest death-rates per 1,000 live Births from *diarrhœa* and *enteritis* among children under two years of age were 14·1 in West Bromwich, 15·0 in Nottingham, 15·7 in Liverpool, 17·1 in Wakefield, 17·2 in Sunderland and 20·9 in West Hartlepool.

Small-pox.

No death from small-pox was registered during the quarter.

A supplementary table (VIIIa.) showing the distribution of the cases of small-pox notified during the 13 weeks ended 3rd October, 1931, is given on page 24.

NATURAL INCREASE OR DECREASE.

The natural *increase* of population by excess of Births over Deaths was 64,522 as against natural increases of 71,960, 67,028 and 69,207 in the corresponding quarters of 1928, 1929 and 1930 respectively.

NOTES ON MARRIAGES.—Second Quarter, 1931.

The number of *persons* married in the *Second* quarter of 1931 in England and Wales was 170,138, an increase of 76,930 on the number in the preceding Quarter, but 6,138 less than that in the corresponding quarter of 1930. The number corresponds to an annual rate of 17·1 per 1,000 of the estimated mid-year population for the year 1931.

UNITED KINGDOM AND IRISH FREE STATE.—

First Quarter, 1931.

In Great Britain and Ireland 204,106 births and 201,884 deaths were registered in the three months ended 31st March, 1931. The increase of population owing to the excess of births over deaths was therefore 2,222. The number of persons married was 117,156.

For facts, in detail, concerning Scotland, Northern Ireland, and the Irish Free State, reference should be made to the Returns published by their respective Registrars-General.

METEOROLOGY.***JULY, 1931.**

July was both wet and dull with widespread thunderstorms accompanied in many instances by heavy rain which caused much local flooding. No district was free from rain for more than a day or two at a time; at Redruth the month was the wettest July since 1888 and at Newquay the wettest July in 39 years. Amongst the largest daily falls were 53 mm. at Hawkshead (Lancs.) on the 3rd, 48 mm. at Newquay on the 6th, 45 mm. at Falmouth on the 11th, 48 mm. at Osgodby on the 14th, 40 mm. at Barnsley on the 25th and 36 mm. at Lancaster on the 29th. A conspicuous exception to the general excess of rainfall (in Berkshire and the Devon-Cornwall peninsula monthly totals exceeded twice the average July figures) occurred along the north-west coast from Southport to Anglesey where rainfall was below the July average; at Rhyl and Llandudno the month's total was only about half the July average. There was a conspicuous absence of warm days but at night the temperature frequently exceeded the July normal. In the south and east, the temperature frequently exceeded 75° F. during the periods 1st-7th, 11th-12th and 22nd-24th; at Shoeburyness 80° F. was reached on the 12th. In most districts the mean temperature differed little from the normal July value. Sunshine aggregates for the month were for the fourth consecutive month below the normal; the nearest approach to the average occurred in the Channel Isles and the south-east where 90 per cent. and 80 per cent. respectively of the average July value were recorded.

AUGUST, 1931.

August was wet, cool and dull. Following on a very wet June and July the month completed one of the wettest summers since comparable records began. Mean temperatures were below the normal, in several places in the Midlands and Eastern Counties by two or three degrees. The only really warm days occurred from the 3rd to 5th during which the temperature rose above 75° F. and in one or two places touched 80° F. or 81° F. (81° F. at Hartest (Suffolk) on the 5th and 80° F. at Aberystwyth on the 4th). In the extreme north-west of England and in western Wales rainfall was below the average for August but elsewhere there was a pronounced excess, many places in the Midlands and the south-east recording more than twice the average August rainfall; at Hampstead (London) the month's total, 130 mm., was the largest August total since records were commenced there in 1910. Thunderstorms, accompanied locally by heavy rain and flooding, particularly in the south, occurred between the 3rd and 9th and between the 14th and 21st. From the 3rd to the 10th scarcely a day passed without a noteworthy fall. Amongst the most noteworthy were:—77 mm. at Nailsworth (Glos.) on the 4th, 74 mm. at Petersfield (in less than 1 hour) on the 5th, 155 mm. at Black Sluice (South Boston, Lincs.) on the 8th. Little or no rain occurred after the 22nd except on the 24th when a deep depression off Brest which moved eastwards over France caused severe gales in the Channel and heavy rain in the south-west of England and in

* Furnished by the Director of the Meteorological Office.

the Channel Isles (82 mm. at Jersey). In the north-west and in northern Wales the aggregate sunshine for the month slightly exceeded the average for August but in most places, especially in the east and south, was considerably less than the average.

SEPTEMBER, 1931.

September was dull, rather cold and, apart from unusually heavy rain during the first four days, relatively dry. From about the 6th onwards conditions were mainly anti-cyclonic and a prominent feature of the month was the prevalence of winds between north-west and north-east. The warmest days occurred at the beginning and about the middle of the month when 70° F. and over was recorded in many places (73° F. at Huddersfield and Attenborough on the 1st and 72° F. at York and Hull on the 15th). Low day temperatures and ground frost at night prevailed widely from the 5th to the 13th. In all districts the mean temperature was below the average value for September, locally in the eastern counties by 3° F. or 4° F. The outstanding feature of the month's weather was the abnormally heavy rainfall during the first four days. Amongst the largest daily totals were :—42 mm. at Cantref (Brecknock) on the 1st, 40 mm. at Burnley on the 2nd, 65 mm. at Mansfield on the 3rd, and 127 mm. at Castle-ton (Yorks.) on the 4th. As a result of the heavy falls during these four days, monthly totals in the Midland and North of England were well above the average September figure, exceeding $2\frac{1}{2}$ times the average locally in Yorkshire. Flooding was widespread and in the north severe. In all districts sunshine aggregates were for the sixth consecutive month less than the average, the deficiency being greatest in the Midlands and the North of England where the mean daily duration of bright sunshine was in several places less than $2\frac{1}{2}$ hours and over 2 hours below the average. At Southport (1896), Liverpool (1908) and Ross-on-Wye (1915) the month was the dullest September on record, the year in brackets indicating the first year for which records are available at these stations. With the prevalence of anticyclonic conditions fog occurred locally fairly frequently, industrial towns and large cities being most affected.

ENGLAND and WALES.—VALUES of AIR TEMPERATURE, RAINFALL and SUNSHINE for the THIRD QUARTER of 1931, expressed as deviations from or percentages of the normal values, for the several Districts.

District.	Air Temperature.			Rainfall.		Sunshine.	Normal Values 1881-1915.			
	Highest.	Lowest.	Deviation from Normal Daily Mean.	Percentage of Normal.	Number of Days. Deviation from Normal.	Percentage of Normal.	Daily Mean Temperature.	Total Rainfall.	Number of Days.	Daily Sunshine.

Table III.—BIRTH-RATE, DEATH-RATE and ANALYSIS of MORTALITY during the last Five Quarters.

(Provisional figures. The rates for the year 1930, and for England and Wales for the year 1931, have been calculated on the populations estimated to the middle of those years, while those for the Towns for 1931 have been calculated on the provisional resident population based on the preliminary figures from the 1931 Census. The mortality rates refer to the whole population as regards England and Wales, but only to civilians as regards the groups of towns.)

* Non-civilian deaths are excluded from this table and the comparable civilian populations where different from those shown are as follows:—Newcastle-on-Tyne C.B., 283,700; Carlisle C.B., 57,250; Newport (Mon.) C.B., 89,270; Cardiff C.B., 223,500; Greater London, 8,164,610; 17 Great Towns 2,130,400. Remainder of Outer Ring 1,668,150.
† The populations of Edinburgh and Glasgow are the 1931 Census figures. That of Dublin is estimated to the middle of 1931 and that of Belfast is the 1926 Census figure, yearly estimates having been discontinued. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland. Births are similarly corrected. Deaths in Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the area, and by the inclusion of certain institutional deaths occurring elsewhere. Births and Deaths in Dublin are corrected by the exclusion of births and deaths of persons not belonging to the City of Dublin, and by the inclusion of deaths of residents of the City registered in certain adjacent Rural Districts and in the other Eleven Principal Towns. The figures for Edinburgh and Glasgow relate to the calendar quarter.

ble VI.—159 SMALLER TOWNS } POPULATION, BIRTHS, and DEATHS* for Quarter
(Adjusted populations 20,000- } ended 30th September, 1931.
50,000 in 1921).

* For statistics of other Colonial and Foreign Cities during the Second Quarter of 1931, see Quarterly Return for that period.

† The deaths in this column relate to all ages for Bombay, Madras, Oslo, and to children under 1 year of age for Amsterdam, Copenhagen, Stockholm, Gothenburg, the German Cities, Cairo, and Alexandria.

‡ Including 134 deaths from Cholera in Calcutta, 59 in Bombay, and 1 in Madras.

§ Including deaths from Croup in Bombay, Paris, Antwerp, Budapest, Warsaw and Rio de Janeiro.

¶ The population and deaths refer to the civilian population only.

|| The registration of Births in Bombay is incomplete.

Table VIII.

EXPLANATORY STATEMENT.

The figures relating to Births and Deaths are tabulated from Returns furnished by the Local Registrars, those relating to Marriages from Returns received from the Clergy, Authorised Persons, Registrars of Marriages, &c. The live births and deaths for the English and Welsh towns in Tables III., V., VI. and VII. have been provisionally corrected by the exclusion of those not belonging to the town and as far as possible by the inclusion of those belonging to the town but occurring in other areas. These figures may not correspond exactly with the revised figures published later in the Statistical Review.

The figures relating to Notifications of Infectious Diseases are summarised from those published in the Weekly Returns, adjusted in respect of any returns or corrections received too late for insertion in that series.

Table I. shows, for England and Wales, the Marriages, Births and Deaths for the 10 years preceding, and for each quarter of those years.

Table II. shows the Annual Rates calculated on the above.

Table III. shows the Birth and Death Rates, and Analysis of Mortality during the last 5 quarters, in (a) England and Wales, (b) 107 County Boroughs and Great Towns, and (c) Smaller Towns with adjusted populations 20,000-50,000 in 1921.

Table IV. shows the Births, Deaths (distinguishing deaths of Infants under one year) in the Quarter under review for Administrative Counties with the Associated County Boroughs, and Table IVa. the Marriages in the same and in the preceding Quarter in England and Wales by Registration Counties.

Table V. shows, for the 107 County Boroughs and Great Towns and the Metropolitan Boroughs, the Births and Deaths (distinguishing certain causes and deaths of Infants under one year) and the corresponding annual rates.

Table VI. shows, for the 159 Smaller Towns, the Births and Deaths (distinguishing certain causes and deaths of Infants under one year) for the quarter.

Table VII. shows the Births and Deaths (distinguishing certain causes) and death-rates in London and in certain cities in the British Empire and in foreign countries, in the last available quarter.

Table VIII. is a summary of returns of Notified cases of Infectious Diseases. These figures are included in the present publication by arrangement with the Ministry of Health, in pursuance of Section 5 of the Census Act, 1920.

Table VIIIa. shows the local distribution of the cases of small-pox notified.

Note:—The returns for the quarters ending 30th June and 31st December respectively contain lists of the changes of boundaries of administrative areas during the six months ending on these dates, that for the quarter ending 30th September a table relating to summer mortality in London from diarrhoea and enteritis, and that for the quarter ending 31st December a summary of certain figures for the year,

NOTES ON THE FOURTH QUARTER OF 1931.

ENGLAND AND WALES.

Births.

The 147,619 live Births registered in the *Fourth* Quarter of 1931 were 7,009 less than the number recorded in the corresponding Quarter of 1930, and corresponded to an annual rate of 14·6 per 1,000 of the estimated mid-year population for the year 1931. This rate is the lowest recorded in any quarter since the establishment of civil registration. The illegitimate live Births totalled 6,064, or 667 less than the number shown in the Return for the Fourth Quarter of 1930.

Of these 147,619 live Births 75,845 were males and 71,774 females, giving a proportion of 1,057 males to 1,000 females; the average proportion in the 10 preceding Fourth Quarters was 1,044.

The number of Stillbirths, the corresponding annual rate per 1,000 population, and the percentage of the total Births registered during the last ten Quarters are shown below.

Quarter.			Number.	Annual rate per 1,000 population.	Percentage of total births registered.
1929					
Sept.	6,569	0·66	3·9
Dec.	6,463	0·65	4·1
1930					
March	7,069	0·72	4·3
June	7,098	0·72	4·0
Sept.	6,850	0·68	4·0
Dec.	6,560	0·65	4·1
1931					
March	7,078	0·72	4·2
June	6,935	0·70	4·1
Sept.	6,567	0·65	3·9
Dec.	6,322	0·63	4·1

Deaths.

The Deaths (excluding stillbirths) registered numbered 117,992 and were 21,247 more than in the preceding Quarter, and 2,257 more than in the corresponding Quarter of 1930. They comprised 60,039 males and 57,953 females, a proportion of 1,036 males to 1,000 females. The death-rate was 11·7 per 1,000 of the population or 0·2 per 1,000 above that recorded during the Fourth Quarter of last year.

The Mortality of infants under one year of age was equal to 66 per 1,000 registered live births. This rate was 7 per 1,000 below the average of the 10 preceding Fourth Quarters.

Urban Mortality.

The highest death-rates from certain epidemic diseases in the 107 Great Towns (Table V.) last quarter were as follows:—

From *Measles* 0·49 in Middlesbrough, 0·51 in Bolton, 0·53 in Stockton-on-Tees, 0·98 in Carlisle and 1·00 in Stoke-on-Trent; from *whooping cough* 0·20 in Warrington, 0·23 in Wigan, 0·28 in Newcastle-on-Tyne, 0·31 in Bootle and 0·34 in Liverpool; from *diphtheria* 0·29 in Stockport, 0·34 in Wakefield, 0·44 in Dewsbury, 0·50 in Ipswich and 0·55 in Kingston-upon-Hull; from *influenza* 0·70 in St. Helens, 0·73 in Burnley, 0·86 in Blackpool, 0·88 in Wigan, 0·93 in Bury and 1·10 in Rochdale.

The highest death-rates per 1,000 live Births from *diarrhœa and enteritis* among children under two years of age were 25·2 in Stoke-on-Trent, 25·5 in Salford, 25·7 in Birkenhead and 29·0 in Nottingham.

Small-pox.

During the quarter small-pox was mentioned as a cause of death in one case which has been provisionally classified to small-pox and assigned to Alfreton U.D. (Derbyshire Ad. Co.).

A supplementary table (VIIIa.) showing the distribution of the cases of small-pox notified during the 13 weeks ended 2nd January, 1932, is given on page 24.

NATURAL INCREASE OR DECREASE.

The natural *increase* of population by excess of Births over Deaths was 29,627 as against natural increases of 40,036, 37,692 and 38,893 in the corresponding quarters of 1928, 1929 and 1930 respectively.

NOTES ON MARRIAGES.—Third and Fourth Quarters, 1931.

The number of *persons* married in the *Third* quarter of 1931 in England and Wales was 198,744, an increase of 28,606 on the number in the preceding Quarter, and 1,960 more than that in the corresponding quarter of 1930. The number corresponds to an annual rate of 19·7 per 1,000 of the estimated mid-year population for the year 1931.

The number of *persons* married in the *Fourth* quarter was 160,714 a decrease of 38,030 on the number in the preceding Quarter, but 1,206 more than that in the corresponding quarter of 1930. The number corresponds to an annual rate of 15·9 per 1,000 of the estimated mid-year population for the year 1931.

UNITED KINGDOM AND IRISH FREE STATE.— Second Quarter, 1931.

In Great Britain and Ireland 210,176 births and 146,404 deaths were registered in the three months ended 30th June, 1931. The increase of population owing to the excess of births over deaths was therefore 63,772. The number of persons married was 196,692.

For facts, in detail, concerning Scotland, Northern Ireland, and the Irish Free State, reference should be made to the Returns published by their respective Registrars-General.

SUMMARY 1931.

A summary relating to the year 1931 giving some of the Annual Tables hitherto published in the Quarterly Return for the December Quarter will be found on pages 26-33 of this publication, the tables being numbered IX-XII. The remainder of the Annual Tables will be published in the next March Quarterly Return.

ENGLAND AND WALES.

According to the quarterly returns furnished by local registrars, 632,580 live births and 491,635 deaths (excluding stillbirths) were registered in England and Wales in the year 1931. The natural increase of population, by excess of births over deaths, was, therefore 140,945, the average annual increase in the preceding five years having been 182,953. The number of persons married during the year was 622,804.

Provisional rates for England and Wales in 1931 per 1,000 of the estimated population at the middle of the year, were as follows:—

Marriage-rate	15·6
Live Birth-rate	15·8
Death-rate	12·3

The number of stillbirths per 1,000 total births (including stillbirths) was 41 and infant mortality was 66 per 1,000 live-births. The birth-rate was the lowest recorded, being 0·5 below that for 1929 and 1930 the previous lowest record; the death-rate was 0·9 above that for 1930 and the infant mortality rate was 6 per 1,000 above that for 1930, but only in 1928 and 1930 has this rate been lower.

The marriage-rate of 15·6 is 0·2 below that for last year and 1929 which were the highest recorded since 1921.

METEOROLOGY.***OCTOBER, 1931.**

October was not only remarkably dry but conspicuously sunny. During the first half of the month maximum temperatures were mostly above the normal but in consequence mainly of a spell of cold northerly winds from about the 21st to 30th, during which clear skies at night gave rise to some abnormally low temperatures, monthly mean temperatures were generally about or below the normal, the deficit, however, in most places being less than 1°F. At Ross-on-Wye the screen minimum temperature on the morning of the 27th, viz. 21°F., was the lowest October reading in 70 years records. In most districts the month was the first since March in which sunshine aggregates exceeded the normal; the month was the sunniest October at Liverpool and West Kirby since 1908. During the period 24th to 28th daily sunshine records exceeded 8 hours and in a few places 9 hours on one or more of these days.

In many parts of England little rain of any importance occurred since the abnormally heavy falls during the first four days of September. Over the greater part of the south, totals were less than one-fifth of the normal. The month was a record dry October in several places, at Teignmouth for at least 60 years, at Redruth for 52 years, at Hereford for 37 years and at Eastbourne for 35 years.

NOVEMBER, 1931.

A remarkable feature of November was the abnormal prevalence of southerly winds; the month was very mild and except locally in the north-east, wet. In the west and north-west many places had more than twice the normal November rainfall; at Southport (Hesketh Park) with the exception of November 1890, the month was the wettest November in 61 years observations. Remarkably heavy rain fell in the west on the 2nd and 3rd, in Patterdale (Lake District) 8.65 inches and 9.61 inches at Blaenauhydfder to the north of the Black Mountains. Serious flooding developed; Derwentwater and Bassenthwaite which are about 5 miles apart were joined in one great lake. Sunshine aggregates exceeded the normal locally in the Midlands, and the south-west and were generally deficient elsewhere. In the south-east, where aggregates were generally below the normal, London had about the normal sunshine allowance for November. Fog occurred fairly frequently in the north-east and Midlands; it occurred over a wide area on the 22nd and was widespread during the last two days of the month.

DECEMBER, 1931.

As in the preceeding month, unusually mild weather prevailed during December. Anticyclonic conditions predominated and in consequence there was little precipitation but considerable cloudiness. The 4th was an abnormally mild day and in some places the maximum temperatures, which were mostly in the neighbourhood of 60°F., were the highest recorded in December; at Richmond

* Furnished by the Director of the Meteorological Office.

(Kew Observatory) the maximum temperature, 59°F., was the highest recorded in December since at least 1871, at Ross-on-Wye 59°F. was the highest December temperature for over 70 years, at Cambridge 60°F. was the highest recorded since at least 1876 whilst 58°F. at Oxford has only once been equalled in December since at least 1871, viz., in 1897. Exceptionally mild conditions again prevailed from the 23rd to 28th. Associated with anticyclonic conditions and fog some low maximum temperatures were recorded on the 18th and 19th, e.g. 27°F. at Ross-on-Wye on both days. Over the country as a whole the general precipitation was less than half the normal and locally in the south did not exceed one quarter of the normal. In the north-east and locally in the Midlands there was an excess of sunshine but elsewhere aggregates were below the normal. As illustrating the general dullness of the month, it may be mentioned that in London (Greenwich and Westminster) no sunshine was recorded from the 11th to the 26th inclusive, while the month at Southport was the duller December since that of 1912. The sunniest periods occurred at the beginning and end of the month and on the 7th, 17th and 18th. Outstanding daily records were 7.1 hours at Eastbourne and 7.0 hours at Ross-on-Wye and Torquay on the 7th and 7.2 hours at Torquay on the 30th. Dense fog occurred in many places on the 1st and 2nd, in London and the south-east on the 18th and more widely on the 19th and 20th.

ENGLAND and WALES.—VALUES of AIR TEMPERATURE, RAINFALL and SUNSHINE for the FOURTH QUARTER of 1931, expressed as deviations from or percentages of the normal values, for the several Districts.

* Non-civilian deaths are excluded from this table and the comparable civilian populations where different from those shown are as follows:—Newcastle-on-Tyne C.B., 283,600; Tynemouth C.B., 64,720; Carlisle C.B., 57,290; Newport (Mon.) C.B., 89,210; Cardiff C.B., 223,500; Greater London, 8,177,300; Outer Ring 3.8, 3,200; 17 Great Towns 2,134,750; Remainder of Outer Ring 1,678,450.
† The populations of Edinburgh and Glasgow are the 1931 Census figures. That of Dublin is estimated to the middle of 1931 and that of Belfast is the 1925 Census figure. Yearly estimates having been discontinued. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland. Births are similarly corrected. Deaths in Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the area, and by the inclusion of certain institutional deaths occurring elsewhere. Births and Deaths in Dublin are corrected by the exclusion of births and deaths of persons not belonging to the City of Dublin, and by the inclusion of residents of residents of the City registered in certain adjacent Rural Districts and in the other Eleven Principal Towns. The figures for Edinburgh and Glasgow relate to the calendar quarter.

* For statistics of other Colonial and Foreign Cities during the Third Quarter of 1931, see Quarterly Return for the period.

† The deaths in this column relate to all ages for Bombay, Madras, Oslo, and to children under 1 year of age for Amsterdam, Copenhagen, Stockholm, Gothenburg, the German Cities, Cairo, and Alexandria.

‡ Including 9 deaths from Cholera and 2 from Plague.

§ Including deaths from Croup in Bombay, Paris, Antwerp, Budapest, Warsaw and Rio de Janeiro.

¶ The deaths relate to Civilians only and the death-rate is based on an estimated civilian population.

¶ The registration of Births in Bombay is incomplete.

Table VIII.

PART I.—CITY OF LONDON AND METROPOLITAN
BOROUGH.PART II.—BOROUGH AND OTHER URBAN DISTRICTS AND RURAL DISTRICTS with
enumerated populations over 10,000.
(Census 1921).

PART III.—PORT SANITARY DISTRICTS.

PART IV.—ENGLAND AND WALES.

Cases of certain Infectious Diseases
notified in the 13 weeks ended
2nd January, 1932 (Civilians only).

PART I.	Scarlet Fever.	Diphtheria.	Enteric Fever.	Pneumonia.	Puerperal Fever.	Puerperal Pyrexia.	Ophthalmia Neonatorum.	PART II.— continued.	Scarlet Fever.	Diphtheria.	Enteric Fever.	Pneumonia.	Puerperal Fever.	Puerperal Pyrexia.	Ophthalmia Neonatorum.

* The hours of observation are 9 a.m. and 9 p.m. local time.

† The normals used are obtained from observations extending over 35 years (1831-1915).
Pressure is expressed in millibars (1000 mb. = 29.531 mercury-inches).

† A day is reckoned as "generally clear" if the average of the estimates of the fraction of sky covered by cloud at 9 a.m., 3 p.m., and 9 p.m. is less than .2, and as "generally overcast" if the average is greater than .8. Days persistently cloudless and days persistently overcast refer to the period midnight to midnight.

Wind Force.—The Summary is obtained from the records of a cup anemograph having 5 in. cups and 15 in. arms. The factor used is 3. Winds above 38 miles per hour are reckoned as gales and winds between 13 and 38 miles per hour as moderate or strong winds. Direction is not tabulated when the speed of the wind is less than 5 miles per hour and winds of less than that velocity are counted as calm.

Table XII.—BIRTHS and DEATHS in LONDON and in certain CITIES in the BRITISH EMPIRE and FOREIGN COUNTRIES, 1931. (52 weeks.)

Note.—The figures in this table are compiled from the weekly returns.

CITIES.	POPULATION (estimated).*	BIRTHS (exclud- ing stillborn).	Stillbirths.	Live Birth - rate per 1,000 living.	DEATHS (exclud- ing stillborn).	Death - rate per 1,000 living.	Deaths of Infants under 1 year of age.	Rate per 1,000 Live Births.	PRINCIPAL EPIDEMIC DISEASES.							Diarrhoea and Enteritis (under 2 years).**

* These populations relate, as far as possible, to the middle of the year. They differ in some cases from those in Table VII.

† The population is the estimated total at Mid 1931. Deaths relate to Civilians only and the death-rate is based on an estimated civilian population.

‡ Including deaths from croup in Bombay, Paris, Antwerp, Budapest, Warsaw, and Rio de Janeiro.

*** The deaths in this column relate to all ages for Bombay, Madras, and Oslo and to children under 1 year of age for Copenhagen, Stockholm, Gothenburg, and the German cities.

§ Including 78 deaths from Cholera in Bombay and 152 in Madras, and 24 from Plague in Bombay.

¶ The Registration of Births in Bombay is incomplete.

Table XIII.—CHANGES in the BOUNDARIES of ADMINISTRATIVE AREAS which took effect during the Six Months ended 31st December, 1931.

Date of Change.	Authority for Change.	Administrative Area affected by Change.		Portion transferred.	
		Area diminished (or extinguished*),	Area increased (or created†).	Acreage (Land and Inland Water).	Census Populations. 1921. 1931 (un-revised).
